

HP Stitch S500 64-in Printer

The robust, efficient printer for highly demanding dye sub users¹

Enjoy reliable, unattended printing

- Print an entire shift unattended or overnight with the largest media rolls² and large ink supplies.
- Get reliable image quality with 2xCMYK printheads and automatic compensation of up to 30% nozzles out.¹
- Reduce telescoping and manual media adjustments with the tension sensing winder and media advance sensor.
- Rely on color consistency from printer to printer.²

Optimize your uptime with easy maintenance

- Reduce downtime and service costs. For the first time, you can replace the printheads yourself.²
- Stay ready to print outstanding quality, and reduce manual interventions, with automatic maintenance.
- Simplify and control your print operations and maximize uptime with HP Service and HP PrintOS.

Perfect for fleet environments

- Double your unattended printing capacity without increasing your production space.²
- Efficiently manage your fleet, and remotely monitor printer status and ink and substrate use, with HP PrintOS.
- Easily observe the status of your printer—at a glance and from afar—with the highly visible beacon.

This printer is intended to work only with cartridges that have a new or reused HP chip, and it uses dynamic security measures to block cartridges using a non-HP chip. Periodic firmware updates will maintain the effectiveness of these measures and block cartridges that previously worked. A reused HP chip enables the use of reused, remanufactured, and refiled cartridges. More at: http://www.hp.com/learn/ds

¹ Reliable image quality enabled with 2xCMYK printheads and automatic compensation of up to 30% nozzles out based on internal HP testing, July 2020. Unattended printing enabled by large media rolls and large ink supplies. ² Compared to alternative 64-inch dye-sublimation based textile printers available as of June, 2020. Largest rolls up to 121 lb (55 kg). The HP Stitch S Printer series provides HP SmartColor tools and a built-in spectrophotometer for color consistency. Front media loading saves 50% floor space.

¹ The color variation inside a printed job has been measured at 6-pass mode on transfer media and also in direct-to-fabric situations within this limit: maximum color difference (95% of colors) ≤ 1.5 dE2000. Reflective to room and addition within this american making of a straight of the standard making of the standard making of the standard CIEDE2000 as per CIE Draft Standard DS 014-6/E:2012. 5% of colors may experience variations above 1.5 dE2000. Backlit substrates measured in transmission mode may yield different results. Results are dependent on

sublimation process variability. ² Papers are hydroscopic materials. They can absorb or lose moisture depending on external humidity conditions. A low level of substrate's moisture and external relative humidity is always recommended when printing on paper based materials. Recommended external relative humidity is between 25% to 50%.
